INTRODUCTION

About this guide

FERNIX ERP runs the front desk of Al Taj Medical Center: patients' tokens become invoices, cashiers bill and print them, and every dirham is accounted for at the end of each cashier's day.

How this guide is organised

The guide follows the working day. Part 1 explains the ideas everything else builds on. Part 2 is the cashier's day. Parts 3 to 5 are for supervisors and System Managers, and Part 6 lists the messages you may see. The appendix is the full permissions reference.

Where to start

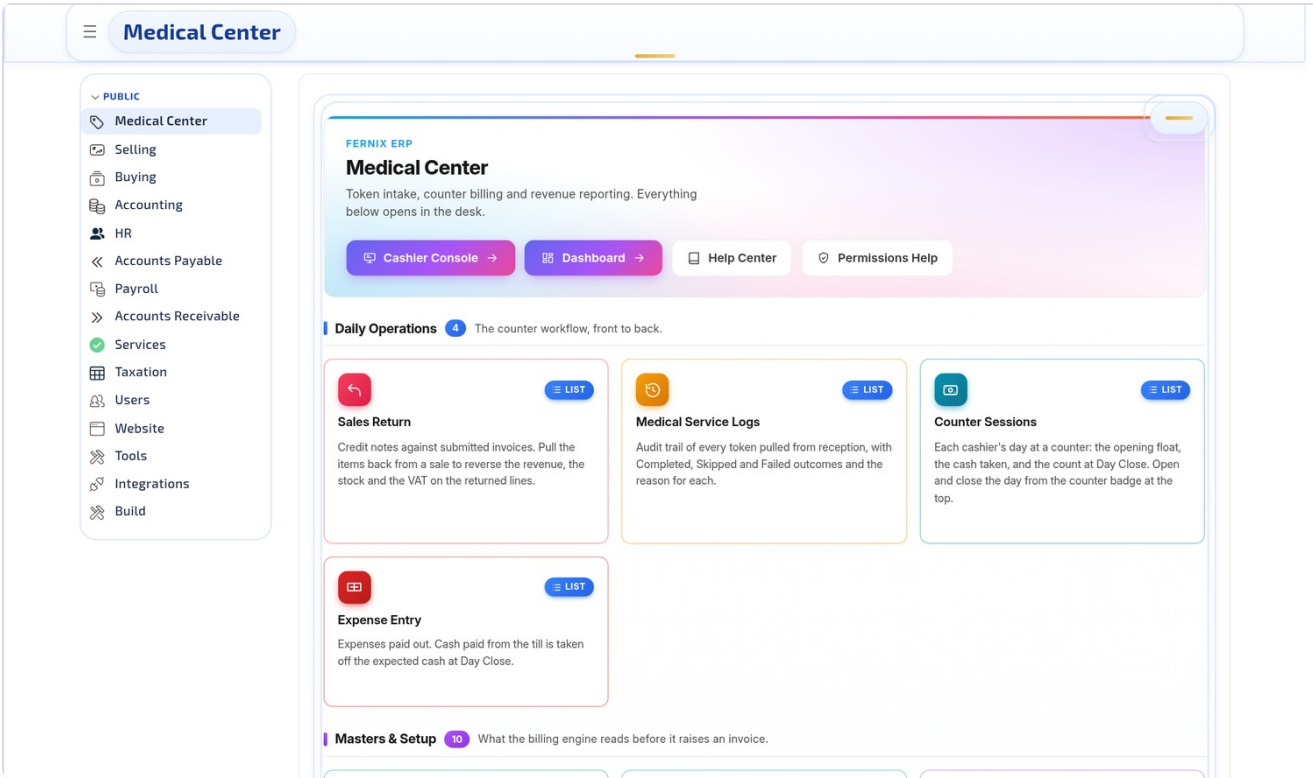

You are	Read	For
Cashiers	Part 1, then Part 2	Opening and closing the day, billing, printing, credit payments.
Supervisors	Parts 1–3 and 6	Approving differences and PCs, refunds, expenses, old drafts.
System Managers	All parts	Setting up counters, token sync, prices, roles and reports.

Conventions

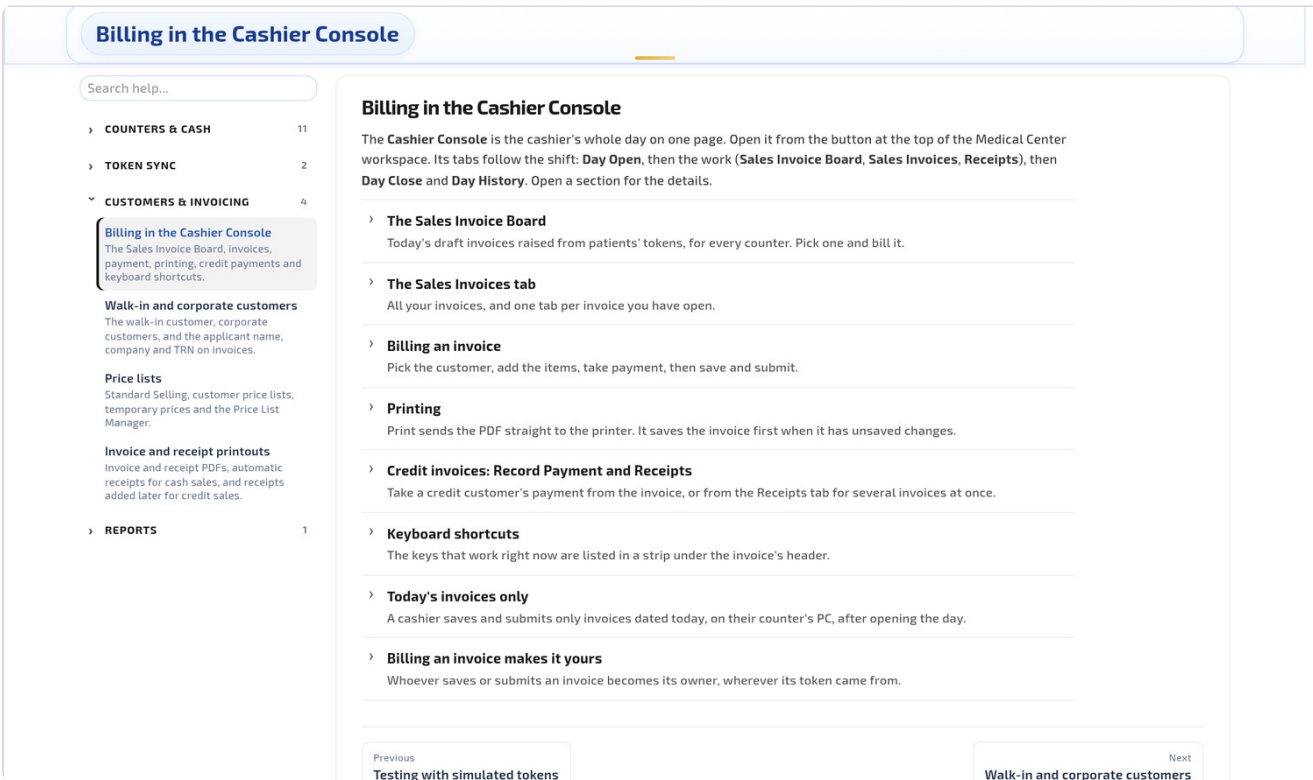

- **Bold** marks a button, field, tab or menu as it appears on screen, for example **Open Day**.
- Keys are written as **Ctrl+P**: hold Ctrl and press P. On a Mac, use ⌘ in place of Ctrl.
- "See *chapter*" points to another chapter; in the PDF it is a link.

Help inside the system

The same guides are in the system itself: **Help** → **Help Center** in the top bar, or **Help Center** and **Permissions Help** on the Medical Center workspace.

The Medical Center workspace: the Cashier Console, Dashboard, Help Center and Permissions Help at the top, then every screen by area

The Help Center, with this guide's chapters as topics

PART 1

Getting Started

How the counters, the cashier's day and the roles fit together.

1 How counters and days work

2 Roles and who can do what

CHAPTER 1

How counters and days work

Every payment taken at the front desk belongs to a **counter**, a **counter PC** and a **cashier's day**. The system uses these three to work out, at any moment, how much cash should be in each till.

The three pieces

Piece	What it is	Example
Counter	A desk where money is taken.	Counter 1
Counter PC (Counter Device)	A computer registered to a counter. The system gives it a number, because browsers cannot read a hardware id.	DEV-0001
Counter Session (the "day")	One cashier's shift at one counter, from Day Open to Day Close.	CS-2026-00001

A normal day

1. **Open the day.** Count the cash in the till (the *float*) and click **Open Day**. See [Opening your day](#).
2. **Bill from the Cashier Console.** Patients' tokens arrive as draft invoices on its **Sales Invoice Board** tab, which shows today's drafts for every counter and updates by itself. Search it by invoice number, customer, company or token. Click **Open Invoice**, take payment and submit; the invoice opens in the console's **Sales Invoices** tab and leaves the board once submitted. **Sync Now** fetches new tokens at once. See [Billing in the Cashier Console](#). Every Sales Invoice, Sales Return, Receipt Entry and Expense Entry you save is stamped with your counter, your PC and your day.
3. **Close the day.** The system shows how much cash the till *should* hold. Count what it *does* hold and click **Close Day**. See [Closing your day](#).

Billing is blocked until the day is open, and cashiers bill only invoices dated today. Only cashiers are held to this. Supervisors and the automatic token sync are not. See [Roles and who can do what](#).

The counter badge

The coloured badge at the top of every page shows where you are and what to do next. Click it to go there.

The counter badge in the top bar, here on an unregistered PC

Badge	Meaning	Clicking it
● Counter 1 · DEV-0001 · Day open since 09:02	You are billing on an open day.	Opens Day Close
● Counter 1 · DEV-0001 · Day not opened	You must open the day before billing.	Opens Day Open

Badge	Meaning	Clicking it
● ... · Close awaiting approval	Your close had a difference and waits for a supervisor.	Opens Day Close
● Approval pending · Counter 1	A cashier asked to make this PC Counter 1's PC. That counter already has one, so a supervisor must approve.	Explains what is pending
● Request rejected · Counter 1	A supervisor rejected the request.	Cashiers can ask again
● Unregistered device	This PC is not a counter. Billing is blocked for cashiers.	Supervisors register it; cashiers ask for it

A number next to the badge (supervisors only) counts the day closes and PC registration requests waiting for approval.

How the expected cash is worked out

Opening float	
+ Cash sales	(cash Sales Invoices, not credit sales)
+ Cash receipts	(Receipt Entries: credit collections paid in cash)
– Cash refunds	(cash Sales Returns)
– Cash paid out	(Expense Entries paid in cash)
– Expenditure	(cash paid out of the till, entered at Day Close)
= Expected cash in the till	

Only **submitted** documents whose **payment mode is Cash** count. Card and bank payments never touch the till. Drafts do not count until they are submitted.

Rules worth knowing

- **One open day per counter.** A second cashier cannot open on a counter while someone else's day is open there. They take over with a [handover](#).
- **One unfinished day per cashier.** You cannot open a new day while your last one is open or waiting for approval.
- **One login per cashier.** Signing in on another PC signs you out of the first one.
- **A day is closed only by counting the till.** The Counter Session form has no Submit button. Use the Day Close page.

CHAPTER 2

Roles and who can do what

What a person can do depends on their **roles**, given on their **User**. A person can hold more than one. The **Permissions Help** button on the Medical Center workspace shows the full table, record by record.

The roles

Four roles run the Medical Center. Give each person only the ones they need.

Role	For	In short
Cashier	Counter staff	Opens and closes their day, bills today's invoices, takes payment, collects credit payments, adds customers. Never cancels, never changes prices or masters.
Cashier Approver	A billing lead	Sees every counter's invoices and can cancel, amend and delete them. Give itwith Cashier: on its own it reaches nothing but invoices.
Management	Supervisors	Approves cash differences and counter PCs, closes days for others, manages price lists.
System Manager	Setup and oversight	Manages customers, items, prices, services, counters, settings and users. Reads every invoice but does not change them.

Report Manager, Workspace Manager, Dashboard Manager and Prepared Report User are also offered, for building reports, workspaces and dashboards.

Who can do what

What each role can do at the Medical Center. A person can hold more than one.

Cashier
Counter staff taking payment.
Can Work the counter from the Cashier Console on a registered PC: open the day, bill today's invoices from the Board, take payment, submit and print, collect payments on credit invoices (Receipt Entry), add a customer, and close the day. Look up items, services and other masters.
Cannot Bill an invoice dated another day, or bill at all before opening the day. Cancel, amend or delete an invoice or a receipt. See or change prices, items or any other master. Stay signed in on two PCs at once.

Cashier Approver
Billing lead. Usually given together with Cashier.
Can See every counter's invoices in the Sales Invoice list, and cancel, amend and delete them.
Cannot Anything but Sales Invoices on its own: no customers, receipts or token logs. It is not a supervisor: it cannot approve a cash difference or a new counter PC, and with Cashier it still works on today's invoices only.

Management
The supervisor. A Cashier record marked *Is Supervisor* gives a cashier the same supervisor powers.
Can Approve a cash difference at Day Close and a new PC taking over a counter, cancel a closed day, and manage prices in the Price List Manager. With Cashier, bill without opening a day and handle invoices from other days. Can stay signed in on several PCs.
Cannot Open most records on its own. Give it with the roles for the work the supervisor does, such as Cashier.

System Manager
Setup and oversight.
Can Fully manage customers, items, prices, services, token logs, counters and settings. Read and print every invoice. Has the supervisor's powers too.
Cannot Change an invoice. That is deliberate: assign Cashier or Cashier Approver instead.

Permissions Help on the Medical Center workspace

Who is a supervisor

*System Manager, Management, or a Cashier record marked *Is Supervisor*.*

A supervisor can approve cash differences, approve and register counter PCs, close another cashier's day, and bill without opening a day or on another day's invoice. **Cashier Approver is not a supervisor**: it cannot do any of these. See [Supervisor tasks](#).

To make a cashier a shift lead without the Management role, tick **Is Supervisor** on their **Cashier** record.

Rules that apply to cashiers

These hold for anyone with Cashier who is not a supervisor.

- **Today only.** They save and submit only invoices dated today.
- **Open day, registered PC.** Billing is blocked until they open the day on a registered counter PC.
- **One session.** Signing in on another PC signs them out of the first.
- **Their own list.** The Sales Invoice list and the token logs show only what they own. The **Sales Invoice Board**

shows every counter's drafts for today, and billing one makes it theirs.

See [Billing in the Cashier Console](#).

Roles you will not see

Roles the Medical Center never uses are switched off and hidden.

Accounts, Sales, Purchase, Stock and Item roles, Tab User, Maintenance, Website, Blog, Newsletter, Knowledge Base, Inbox and Translator are disabled. They do not appear in the User form's role list or in Role Permission Manager. The **Role** list opens on the enabled roles; clear its filter to see the rest.

A role that someone still holds is left switched on, so nobody loses access on an update.

Changing permissions

Ask a developer. Changes to the cashier roles in Role Permission Manager do not last.

The permissions of **Cashier** and **Cashier Approver** ship with the app and are set again on every update. A change made to them by hand in **Role Permission Manager** is undone at the next update.

PART 2

Working at the Counter

The cashier's day, from opening the till to handing it over.

-
- 3** Opening your day
 - 4** Billing in the Cashier Console
 - 5** Walk-in and corporate customers
 - 6** Invoice and receipt printouts
 - 7** Closing your day
 - 8** Handing over a counter
-

CHAPTER 3

Opening your day

Open your day at the start of your shift, before you bill anyone. Until you do, the system will not let you save invoices, returns, receipts or expenses.

Before you start

- You must be on a **registered counter PC**. The badge shows the counter's name, such as *Counter 1 · DEV-0001*. If it says **Unregistered device**, ask a supervisor to register the PC.
- No one else may have a day open on this counter. If someone does, they close it first, or hand it over to you. See [Handing over a counter](#).

Steps

1. Click the badge at the top of the page, or open the **Cashier Console** from the Medical Center workspace. It starts on **Day Open** when your day is not open yet.
2. Check **Previous Close on this Counter** on the left. It shows who closed the last day here, when, and the **cash left in the till**.
3. Count the cash now in the till, in the **Count the Opening Cash** grid. Type how many of each note and coin you have. The **Opening Float** fills in from the count. You can also type the total straight into Opening Float.
4. Read the note under the float:
 - **Same as the cash left at the last close**: nothing changed overnight.
 - **Less / more than the last close**: cash was banked, taken out or added since. Explain it in **Remarks**.
5. Click **Open Day** and confirm.

The badge turns green (*Day open since ...*) and you can bill.

Blind count (the default)

Unless a System Manager ticks **Show Previous Day Close Balance in Day Open** in **Settings** (section *Day Open*), Day Open is a blind count: it does not show **Previous Close on this Counter**, the Opening Float starts at zero, and there is no less / more than the last close note or **Take over this count**. Count the till and enter what is there. The day is still linked to the last close behind the scenes, and supervisors see any difference in the Counter Session.

Steps 2 and 4 above, and *Taking over from the last cashier* below, apply only when that setting is ticked.

Taking over from the last cashier

If the last close on this counter was a handover, click **Take over this count**. It copies the outgoing cashier's note-by-note count into your grid and adds a remark. **Check it against the notes in the till before you open**. You are responsible for the till from the moment you open.

If the last close is still **waiting for a supervisor to approve its difference**, you can still open. The count shown is what was actually left in the till.

Messages you may see

Message	What to do
<i>This PC is not a registered counter</i>	Ask a supervisor to register this PC.
<i>Counter 1 is in use</i>	Another cashier's day is open here. They close it with Close & Hand Over , or a supervisor closes it for them.
<i>Your last close is waiting for approval</i>	A supervisor must approve your last close first.
<i>Your day is already open</i>	You are already open. Go to Day Close when your shift ends.

CHAPTER 4

Billing in the Cashier Console

The **Cashier Console** is the cashier's whole day on one page. Open it from the button at the top of the Medical Center workspace. Its tabs follow the shift: **Day Open**, then the work (**Sales Invoice Board**, **Sales Invoices**, **Receipts**), then **Day Close** and **Day History**.

The Sales Invoice Board

Today's draft invoices raised from patients' tokens, for every counter. Pick one and bill it.

Tokens from reception become draft Sales Invoices on the server, about once a minute. The Board lists **today's** drafts, newest first, whoever's token raised them. It updates by itself, and **Sync Now** fetches new tokens at once.

- **Search** by invoice number, customer, the customer's company or token number.
- **Open Invoice** (or click the row) opens it in the **Sales Invoices** tab.
- An invoice leaves the Board when it is submitted.
- The number on the tab counts today's drafts still to be billed.

Drafts from earlier days are not on the Board: a cashier cannot bill them (see *Today's invoices only* below). A supervisor finds them in the **Sales Invoice** list, filtered to Draft.

The Sales Invoices tab

All your invoices, and one tab per invoice you have open.

The **All Invoices** list starts on **Today**. Change the period (This Week, This Month, Last 30 Days, All), the status (Draft, Submitted, Cancelled) or Cash / Credit. **Search** by invoice number, customer, company, mobile or token.

A cashier's list shows the invoices they own. Billing an invoice makes it yours (see below), so everything you billed is there.

Each invoice you open gets its own tab. **New Invoice** (Alt+N) starts a new one. A tab with unsaved changes shows **Not Saved**, and the browser warns you before you close the page with any.

The Sales Invoices tab: search, period, status and payment filters

Billing an invoice

Pick the customer, add the items, take payment, then save and submit.

- Customer.** Pick the customer. For a walk-in, change the name and, if needed, the company and TRN (see [Walk-in and corporate customers](#)). **Customer details** opens the rest: email, company and TRN, address, salesman, token.
- Items.** Search for an item to add it. Each line shows Qty, Rate, Service Charges, GOV, Typing Charges, Transaction Charges, VAT and Net. The Rate is the sum of the charges, and VAT is charged on all of them except GOV (see [Price lists](#)). The pencil on a line opens its details.
- Payment (Alt+P).** Choose the payment mode, or tick **Credit Sale**. For a cash payment, enter the **Received Amount**: it must cover the total, and the change is shown.
- Save (Ctrl+S), then Submit.** A submitted invoice cannot be changed, only cancelled by someone allowed to.

Print shows beside New Invoice chooses whether the customer's **Company** and **TRN** appear on the printout.

Printing

Print sends the PDF straight to the printer. It saves the invoice first when it has unsaved changes.

The invoice's **Print** menu has:

Entry	What it does
Print Invoice	Prints the tax invoice
Preview Invoice	Shows it in a popup first
Print Receipt / Preview Receipt	The same for the receipt. Shown for a cash sale, and for a credit sale once it has been paid

- **Ctrl+P** prints the open invoice, the same as Print Invoice.
- **It saves first.** An invoice with unsaved changes, or a new one with items, is saved before it prints, so the printout always shows what is stored. If the save is stopped (a missing field, say), nothing prints.
- On a counter PC set up for kiosk printing there is no print dialog. See [Setting up counters](#).

The **Sales Invoice form** works the same way: **Print** → **Print Invoice** or **Print Receipt**, and **Ctrl+P**, save first and print the PDF. What the printout shows is in [Invoice and receipt printouts](#).

Show Company In Printout

The Sales Invoice form: Print menu and the shortcuts strip

Credit invoices: Record Payment and Receipts

Take a credit customer's payment from the invoice, or from the Receipts tab for several invoices at once.

- **Record Payment** appears on a submitted credit invoice that is not fully paid. It takes the payment for that invoice, in full or in part, and submits the receipt. The invoice's Print menu then has the receipt.
- The **Receipts** tab collects payment on several of a customer's credit invoices together: pick the customer and the payment mode, then how much goes to each invoice. It is saved as an ordinary **Receipt Entry**.

Invoices count as paid only once the receipt is submitted. A cashier cannot cancel a receipt.

Keyboard shortcuts

The keys that work right now are listed in a strip under the invoice's header.

Keys	In the console	On the Sales Invoice form
Alt+N	New invoice	
Ctrl+S	Save	Save, or Submit a saved draft
Alt+P	Payment	
Ctrl+P	Print Invoice (saves first)	Print Invoice (saves first)
Ctrl+B		New Sales Invoice
Ctrl+G	Search	Search
?	All shortcuts	All shortcuts

On a Mac, use ⌘ in place of Ctrl.

Today's invoices only

A cashier saves and submits only invoices dated today, on their counter's PC, after opening the day.

- Billing is blocked until you open the day on a registered counter PC. See [Opening your day](#).
- An invoice dated another day opens read-only, and its date cannot be changed. Saving it shows *Not Today's Invoice*. Ask a supervisor to handle it.
- Supervisors (System Manager, Management, or a Cashier marked **Is Supervisor**) are not held to either rule.

Billing an invoice makes it yours

Whoever saves or submits an invoice becomes its owner, wherever its token came from.

Pick a draft off the Board that another counter's token raised, and once you save or submit it:

- it is in **your** Sales Invoice list;
- its cash counts in **your** day and on **your** counter's Day Close;
- the reports put it under you;
- the printout names you as **Billed By**, and the receipt as **Received By**.

Cancelling an invoice does not move it.

CHAPTER 5

Walk-in and corporate customers

Walk-ins are all billed to one **Default Walk-in Customer**, and you type the person's details on the invoice. Companies are **Corporate** customers, and their name and TRN are filled in for you.

What prints on the invoice

Applicant Name, Company and TRN on the printout come from Customer Display Name, Customer Company and Tax Id.

On the printout	Comes from the invoice field	Filled in by
Applicant Name	Customer Display Name	The customer's name when you pick a customer. The patient's name on a token invoice. You can change it.
Company	Customer Company	The Corporate customer (see below). Typed by you only on the walk-in customer.
TRN	Tax Id	The customer's Tax Id (see below). Typed by you only on the walk-in customer.

Company and **TRN** print only when **Show Company In Printout** and **Show TRN In Printout** are ticked on the invoice. Both are unticked on a new invoice. The Receipt uses the same fields.

Set up the Default Walk-in Customer

A System Manager creates one Customer for walk-ins and picks it in Settings → Default Walk-in Customer.

1. Create a Customer for walk-ins, for example *Walk-in Customer*. Set **Customer Type** to **Individual**.
2. Set its **Default Payment Mode** to **Cash**, and its **Default Price List** to the list walk-ins pay.
3. Go to **Settings**. In the **Sales Invoice** section, set **Default Walk-in Customer** to this customer and save.

Medical Token Sync

☒ Enable Token Sync

When enabled, a scheduled job pulls medical tokens every minute and raises the matching Sales Invoices. Leave off until Token URL and Cashier records are configured.

Default Walk-in Customer

Walk-in Customer

Customer that token-sync invoices for walk-in patients are raised against. The patient's name and email from the token are kept on the invoice as Customer Display Name and Customer Email. Tokens with a CompanyId are still billed to that company.

Default Walk-in Customer in Settings

Change the walk-in customer

Pick another customer in Settings. New invoices use it at once; saved invoices keep theirs.

- New invoices and new token invoices use the new customer straight away.
- Saved and submitted invoices keep the customer they were made with.
- Draft invoices on the old customer now behave like any other customer. When they are saved, their Customer Company and Tax Id are replaced with the old customer's own, which is usually blank.

Clear the field to stop using a walk-in customer. Token invoices then create one Customer per patient name instead.

Bill a walk-in

Pick the walk-in customer, then type the person's name and, if needed, their company and TRN.

1. Pick the walk-in customer in **Customer**.
2. Change **Customer Display Name** to the person's name. This is the **Applicant Name** on the printout.
3. If the person wants a company on the invoice, type it in **Customer Company**, and the company's TRN in **Tax Id**. Tick **Show Company In Printout** and **Show TRN In Printout**.
4. Enter the mobile number if needed, then save as usual.

Remarks

A new invoice for the walk-in customer, with Customer Display Name and Customer Company to fill in

On the walk-in customer, **Customer Company** and **Tax Id** start empty and stay as you typed them. After the invoice is submitted they cannot be changed.

Corporate customers

A Corporate customer's own name and Tax Id become the invoice's Company and TRN.

Set **Customer Type** to **Corporate** for a company you bill regularly. Enter its **Tax Id** (TRN).

Customer Name * Gehad	Customer Type Corporate	☐ Allow Credit
Customer Code * G001	Discount 0.000	Trade License No
Customer Group * Default Customer Group	Company ID 0	
Tax Id 1234 (Eg: TRN No in UAE)	Typing Center	
	Salesman	
	Default Price List Typing Center Price List	
	Default Payment Mode	
	Payment mode new invoices for this customer start with. Empty uses the company default.	

A Corporate customer with its Tax Id

When you pick a Corporate customer on an invoice:

- **Customer Company** is the Corporate customer's **Customer Name**.
- **Tax Id** is the Corporate customer's Tax Id.
- **Applicant Name** starts as the company's name. Change **Customer Display Name** to the person the service is for.

A Corporate customer can also have a **Discount** %, applied to token invoices billed to it. The **Company ID** is assigned by the system and matches the company in the token service.

People who belong to a company

Link an Individual to a Corporate customer, and their invoices show that company and its TRN.

Open the Individual customer and pick the company in the **Corporate** field. Only Corporate customers can be picked there.

Customer Name * ALPHA PERSON	Customer Type Individual	☐ Allow Credit
Customer Code * 	Corporate Company 77	Trade License No
Customer Group * Default Customer Group	Typing Center 	
Tax Id 	Salesman 	
(Eg: TRN No in UAE)	Default Price List Standard Selling	
	Default Payment Mode 	
	Payment mode new invoices for this customer start with. Empty uses the company default.	

An Individual customer linked to a company in the Corporate field

When you invoice that person:

- **Customer Company** is the linked company's name.
- **Tax Id** is the person's own Tax Id if they have one. Otherwise it is the company's.
- **Applicant Name** is the person's name.

A Corporate customer cannot itself be linked to another company.

Why Company and Tax Id cannot be edited

Except on the walk-in customer, they always come from the Customer record. Fix them there.

On every customer except the walk-in customer, **Customer Company** and **Tax Id** are read-only on the invoice. They are set again from the customer each time the invoice is saved.

To correct them, fix the **Customer** record (its name, Tax Id or Corporate link), then open the draft invoice, pick the customer again and save.

Invoices from tokens

Tokens with a CompanyId bill that company; the rest bill the walk-in customer, with the patient's name as Applicant Name.

The token has	The invoice is billed to	Applicant Name
A CompanyId	The Corporate customer with that Company ID. It is created if it does not exist yet, and its Discount is applied.	The patient's name from the token
No CompanyId	The Default Walk-in Customer	The patient's name from the token

The token has	The invoice is billed to	Applicant Name
No CompanyId, and no walk-in customer set	A Customer with the patient's name, created if needed	The patient's name

The patient's name, email and mobile stay on a token invoice even if you change its Customer.

See also: [Setting up counters](#) for default payment modes per customer, and [Testing with simulated tokens](#).

CHAPTER 6

Invoice and receipt printouts

Every Sales Invoice gets its tax invoice as a PDF attachment. A cash sale gets its receipt at the same time. A credit sale gets its receipt later, when a Receipt Entry pays it, and the receipt is still attached to the invoice.

What the tax invoice shows

The bilingual tax invoice, on the company letterhead.

- **Header:** the company letterhead, with **TAX INVOICE / فاتورة ضريبية** and the company's **TRN** on the right. The receipt has the plain letterhead, without the title.
- **Applicant, company and TRN**, the invoice number and date. Company and TRN print only when ticked on the invoice (see [Walk-in and corporate customers](#)).
- **The lines:** Qty, Service Charge, Typing Charge, Transaction Charges, Gov Fee, Taxable Amount, Tax Amount (5%) and Net Amount, in English and Arabic.
- **A Total row** under the lines. The charge columns are per unit, so their totals are qty × charge.
- **The amount in words**, in English (after **AED**) and in Arabic.
- **Paid Amount** and **Balance** on the right. Paid is the whole total for a cash sale, and what receipts have paid for a credit sale. **Round Off** and **Discount** show above them when the invoice has them.
- The **PAID** stamp once the invoice is paid, **RECEIPT INFO** (below), and the disclaimer.
- **Billed By:** the cashier who billed the invoice, and **Printed On:** when this copy was made.
- **Footer:** the company's address, contacts and services strip.

A tax invoice as printed

The letterhead images are set on the **Company: Header Image** (receipts and other documents), **Invoice Header Image** (tax invoices) and **Footer Image**.

Print an invoice or receipt

Print Invoice and Print Receipt save the invoice first, then send the PDF to the printer.

- **Sales Invoice form:** **Print** → **Print Invoice** or **Print Receipt**, or press **Ctrl+P**.
- **Cashier Console:** the invoice's **Print** menu, or **Ctrl+P**. See [Billing in the Cashier Console](#).

An invoice with unsaved changes is saved first, so the printout always shows what is stored. If the save is stopped, nothing prints. **Print Receipt** appears for a cash sale, and for a credit sale once it is paid.

Where to find the printouts

The invoice and receipt PDFs are attached to the Sales Invoice. Find them under Attachments in the form's sidebar.

Attachment	What it is
SI-00016-09-2026-invoice....pdf	The tax invoice, with a RECEIPT INFO block once the invoice is paid
SI-00016-09-2026-receipt....pdf	The receipt, when there is one

- The PDFs are made again each time the invoice is saved, so they always match the invoice.
- **Print** → **Attach PDF** makes them again at any time.
- Printout PDFs are deleted automatically after **3 days** to save space. Click **Print** → **Attach PDF** to make them again.

Cash sales: the receipt is automatic

A sale that is not a credit sale is paid at the counter. It is its own receipt, numbered RCPT- plus the invoice number.

Nothing extra is needed. When the invoice is saved, both PDFs are attached:

- the **receipt**, numbered after the invoice: **SI-00016-09-2026** gets **RCPT-00016-09-2026**. It shows the Applicant Name, amount, payment mode, and the token and service if there are any;
- the **invoice**, with a **RECEIPT INFO** block giving the same receipt number.

RECEIPT INFO

RECEIPT NUMBER	AMOUNT	DATE	COLLECTED BY	PAYMENT MODE
RCPT-00012-09-2026	75.00	01-09-2026	administrator	Cash

RECEIPT INFO at the bottom of the invoice

Credit sales: add the receipt later

A credit sale has no receipt at first. When a Receipt Entry pays it, the receipt is attached to the invoice automatically.

1. **Submit the credit invoice** with **Credit Sale** ticked. Its invoice PDF has no RECEIPT INFO, and no receipt PDF is attached.
2. **When the customer pays**, create a **Receipt Entry**. It can be made by someone else, on another day:
 - choose the **Payment Mode**;
 - in **Receipt Entry Details**, add a row with the **Customer**, **Reference Type** *Sales Invoice* and the **Amount**;
 - click **Allocations** on the row and enter the **Paying Amount** against the invoice;
 - **Submit** the Receipt Entry.
3. **The invoice is updated for you.** For every submitted credit invoice the receipt pays:
 - **Allocated Receipt Entry** on the invoice shows the receipt's number (read-only);
 - the invoice PDF is made again with **RECEIPT INFO**: the Receipt Entry's number, the amount it paid on this invoice, its date, who created it, and its payment mode;
 - a **receipt PDF** is attached to the invoice next to it.

The RECEIPT INFO block looks the same as for a cash sale, with the Receipt Entry's number in place of RCPT-....

You do not need to open or change the invoice. It stays submitted, and its receipt appears in its Attachments.

Things to know:

- One Receipt Entry can pay several credit invoices. Each gets its own receipt attached.
- Pay each credit invoice with **one** Receipt Entry. If two receipts pay the same invoice, the printout shows only the latest receipt and its amount.
- The invoice and the Receipt Entry are not linked to each other. **Allocated Receipt Entry** is only a record of the number.

Cancelling the receipt

Cancel the Receipt Entry, and the invoice goes back to having no receipt.

When the Receipt Entry is cancelled, each credit invoice it paid is updated:

- **Allocated Receipt Entry** is cleared;
- the receipt PDF is removed;
- the invoice PDF is made again without RECEIPT INFO.

The invoice is unpaid again, and a new Receipt Entry can pay it.

If a printout did not update

Click Print → Attach PDF on the invoice to make the PDFs again.

If submitting a Receipt Entry shows *The printout of SI-... could not be refreshed with this receipt*, the receipt itself was still saved and the payment counts. Only the PDFs were not made. Open that invoice and click **Print** → **Attach PDF**. The error is recorded in the **Error Log**.

Use **Attach PDF** too when the attachments were deleted after 3 days, or when you want a fresh copy.

CHAPTER 7

Closing your day

Close your day at the end of your shift, by counting the cash in the till. The system compares your count with the cash the till should hold.

Steps

1. Submit anything still in draft that was paid in cash. Drafts do not count towards the till.
2. Click the badge at the top of the page, or open the **Cashier Console** from the Medical Center workspace and go to **Day Close**.
3. Check **Cash for the Day** on the left:

Line	What it is
Opening Float	What you opened with
+ Cash Sales	Cash Sales Invoices (not credit sales)
+ Cash Receipts (Credit Collections)	Cash Receipt Entries
– Cash Refunds	Cash Sales Returns
– Cash Paid Out	Cash Expense Entries
– Expenditure	The cash you paid out of the till today, as you enter it in step 4
Expected Cash in the Till	What should be in the till now

Click any line to see the documents behind it, and click a document to open it.

CLOSE

Counted Cash *

Filled from the count, or type the total.

Remarks

Explain any shortage or excess for the supervisor.

Close Day

Close & Hand Over

Hand Over closes your day and logs you out, so the next cashier can sign in here and open with this count.

The Day Close page: Cash for the Day, the note count, and the Close buttons

- Enter **Expenditure**: the total cash you paid out of the till today, for example for water, stationery or a taxi. Leave it empty if you paid nothing out. **Expected Cash in the Till** goes down by this amount as you type. Say what it was for in **Remarks**, and keep the bills with the cash.
- Count the till in **Count the Closing Cash**. **Counted Cash** fills in from the count, or you can type the total.
- Read the result under Counted Cash:
 - The till matches the expected cash.** The day will close.
 - Short by ... / Over by ...** : the day will wait for a supervisor. Write the reason in **Remarks**.
- Click one of:
 - Close Day**: you are done for the day.
 - Close & Hand Over**: another cashier takes this counter now. This closes your day and logs you out. See [Handing over a counter](#).
- Click **Print Day Close Slip** and keep the slip with the cash. It shows the expenditure.

When the count does not match

A difference is not an error. The day goes to **Closing** (Close sent for approval), and a supervisor reviews your remarks and approves it. Then the day is **Closed**.

While you wait:

- The counter is free.** The next cashier can open on it straight away.

- **You** cannot open a new day until your close is approved.

About expenditure

- It is **one amount for the whole day**, entered when you close. It is not entered during the day.
- It only lowers the cash the till should hold. **It is not posted to the accounts.** Give the bills to your supervisor or accountant so they can record the expenses.
- Once the day is closed, you cannot change it. A supervisor or System Manager corrects it by cancelling and amending the day.

After closing

- The badge shows *Day not opened* (or *Close awaiting approval*).
- You cannot bill again until you open a new day.
- A closed day cannot be edited. If the count was wrong, a System Manager cancels and amends it. See [Problems and messages.](#)

CHAPTER 8

Handing over a counter

Use a handover when one cashier finishes and another continues on the **same counter and the same PC**. Each cashier has their own day, so each is accountable only for their own shift's cash.

Outgoing cashier

1. Open **Day Close**, count the till and fill in **Counted Cash**.
2. Click **Close & Hand Over** and confirm.
3. Click **Print Day Close Slip** if you want a copy.
4. Click **Log Out for Next Cashier**.

The counter is now free, even if your count had a difference that still waits for a supervisor.

Incoming cashier

1. Log in on the same PC.
2. Open **Day Open** (the badge takes you there).
3. Under **Previous Close on this Counter**, click **Take over this count**. The outgoing cashier's count fills your grid.
4. **Recount the notes in the till**. Change the grid if anything differs, and say why in **Remarks**.
5. Click **Open Day**.

Things to know

- **You cannot skip the close.** While the outgoing cashier's day is open, Day Open shows *Counter is in use* and will not open.
- **If the outgoing cashier has already left without closing**, a supervisor closes the day for them. See [Supervisor tasks](#).
- **Different PC, same counter?** Only one day can be open on a counter at a time, whichever PC it is on. Hand over first.
- **Moving to another counter?** Close your day on the first counter, then open a new one on the second.

PART 3

Supervision

Approvals, refunds and expenses, and the counter PCs.

9 Supervisor tasks

10 Refunds and expenses

11 How counter PCs are recognised

CHAPTER 9

Supervisor tasks

Who is a supervisor

Anyone with one of these can supervise:

- the **System Manager** or **Management** role, or
- a **Cashier** record with **Is Supervisor** ticked.

Supervisors can register PCs, approve PC requests, approve cash differences and close other cashiers' days. They are not held to an open day or to today's invoices. The counter badge shows them the number of closes and PC requests waiting for approval.

The **Cashier Approver** role is not a supervisor: it can cancel, amend and delete invoices, but none of the tasks on this page. See [Roles and who can do what](#).

Approve a cash difference

When a cashier's count does not match the expected cash, their day waits in **Closing**.

1. Open **Day Close**. Supervisors see **Pending Approvals** at the bottom. You can also click the orange pill on the Medical Center Dashboard.
2. Check the **Expected**, **Counted** and **Difference** columns and read the cashier's **Remarks**.
3. Click **Approve & Close** and confirm.

You can also open the Counter Session itself and click **Approve & Close** there. Your name is recorded as **Difference Approved By** and printed on the Day Close Slip.

When you close **your own** day with a difference as a supervisor, it still waits for a *different* supervisor to approve it.

Close a day for a cashier who has left

If a cashier leaves without closing, their counter stays blocked. No one else can open a day on it.

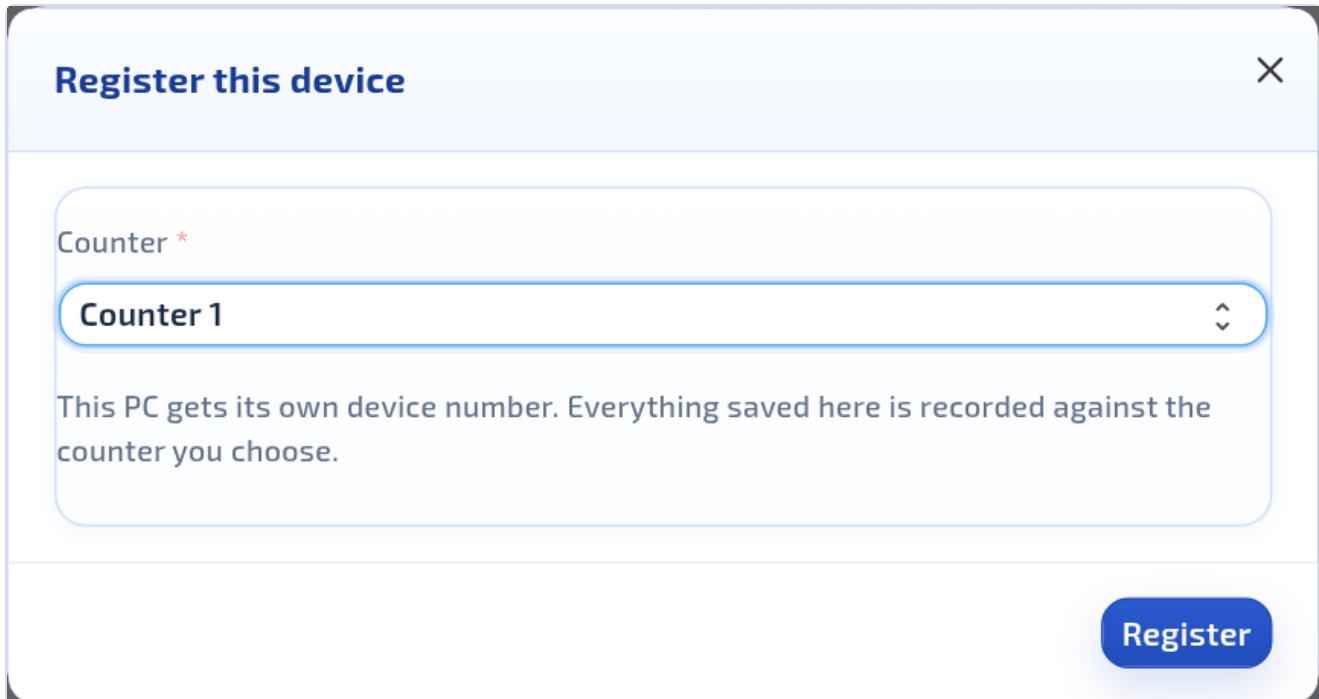

1. Open **Day Close**. **Open Days** lists every other cashier's open day with the cash expected **right now**.
2. Click **Close for Cashier** on that row.
3. Enter any **Expenditure** the cashier paid out of the till, if you know of it. The expected cash goes down by that amount. Count the till in the dialog. **Counted Cash** fills in from the count.
4. Enter a **Reason**. This is required and is printed on the slip.
5. Click **Count & Close**.

The day closes at once. **Any difference is approved in your name**, and you are recorded as **Closed By**. The counter is free for the next cashier.

Register a PC as a counter

Do this once for each PC that takes money.

1. Sign in on the PC itself.
2. Click the red **Unregistered device** badge. Choose the **Counter**, or **+ New counter** to create one, and click **Register**.

The Register this device dialog

The PC gets its own number (DEV-0007). Everything billed on it is recorded against that counter from now on. A counter has one PC: registering disables its previous one. See [How counter PCs are recognised](#) for replacing a PC, browsers, and a PC that has broken.

Approve a PC request

A cashier can ask for their PC to be registered. A request for a counter that already has a PC waits for you, because approving it replaces that PC.

1. Click the counter badge. When requests are waiting, it opens **PCs waiting for approval**.
2. Check the counter, who asked, their browser, and the PC it would replace. A day open on that PC is shown in orange. It carries on on the new PC.
3. Click **Approve**, or **Reject** and give a reason.

Reject a request from a second browser on a PC that already works, and a request to move a counter to another desk while its day is open. See [How counter PCs are recognised](#).

Drafts from earlier days

Token invoices not billed on their day drop off the Sales Invoice Board. Cashiers cannot bill them; a supervisor can.

1. Open the **Sales Invoice** list and filter **Status** to **Draft** and **Date** to before today.
2. Open each one and decide: bill it, or **Delete** it if the patient never paid. To bill it, set the **Date** to today, or tick

Edit Posting Date and Time to keep its own date, then save and submit.

A cashier's own Sales Invoice list shows only their invoices, and token drafts are often owned by another desk or by Administrator, so cashiers may not see these at all. Check for them regularly.

The Sales Invoice list, with Customer, Customer Company and Customer Token filters

Good practice

- **Approve differences the same day**, while the cashier can still explain them.
- **Bill cash only on an open day**. Supervisors are not *forced* to open a day. But cash you take without an open day of your own does not belong to any till, and no Day Close will account for it.
- **Check the Counters panel** on the Medical Center Dashboard during the day. It shows which counters are open, who is on each and the cash in each till.

CHAPTER 10

Refunds and expenses

Money that goes **out** of the till is recorded as a **Sales Return** (a refund to a customer) or an **Expense Entry** (cash paid out). Both are on the Medical Center workspace under Daily Operations. Cashiers cannot make them: a supervisor or System Manager does.

Refund a customer: Sales Return

A Sales Return reverses some or all of a submitted invoice: its revenue, its VAT and its stock.

1. Open **Sales Return**, then **+ Add Sales Return**, and pick the **Customer**.
 2. Click **Get Items From Sales** and pick the invoice. Its lines come in with their charges, and only what has not been returned already.
 3. Remove the lines that are not being returned, or lower their **Qty**.
 4. Choose the **Payment Mode** the money goes back by, then **Save** and **Submit**.
- The charges and VAT come from the original invoice, so the refund matches what was charged. VAT is refunded on everything but GOV, as it was charged.
 - The returned quantity is recorded against the invoice, so it cannot be returned twice.

Cash paid out: Expense Entry

An Expense Entry records an expense and how it was paid.

Add the expense lines, choose the **Payment Mode** and **Save** and **Submit**. Unlike the Day Close **Expenditure** figure, an Expense Entry is posted to the accounts.

Use one or the other for the same payment, not both: either enter it as an Expense Entry during the day, or as **Expenditure** when closing the day (see [Closing your day](#)).

How they affect the till

A cash refund or cash expense lowers the expected cash of the day it was saved in.

At Day Close they appear as **– Cash Refunds** and **– Cash Paid Out**. Only **submitted** documents whose payment mode's **Mode** is **Cash** count, and only in the **open day** of the counter they were saved on.

So enter them **on the counter's PC, while that day is open**. One saved on another PC, or with no day open, belongs to no till: no Day Close accounts for it, and the till looks short.

In the reports, a Sales Return comes off the sales on the date of the return. See [Medical Center reports](#).

CHAPTER 11

How counter PCs are recognised

This page explains how the system knows which counter a PC belongs to, how a PC is registered and approved, what happens when PCs, browsers or cashiers change, and how to recover when a PC breaks. For the basics, read [How counters and days work](#) first.

Two separate things: the PC and the day

Every payment at the front desk depends on two separate things.

	Counter registration	The cashier's day (Counter Session)
Answers	Which PC is this till's terminal?	Who is responsible for the cash in the till right now?
Belongs to	One browser on one PC	One cashier on one counter , not on a PC
Lasts	Months, until the PC is replaced or disabled	One shift, from Day Open to Day Close
Set up by	A supervisor registers it, or a cashier asks for it	The cashier, with Day Open
Ended by	Disabling the Counter Device, or another PC taking over the counter	Day Close (or a supervisor's Close for Cashier)

They depend on each other in one direction only:

- **Opening a day needs a registered PC.** Day Open is refused on a PC that is not a counter.
- **Opening or closing a day never changes the registration.** After Day Close, the PC is still the counter's PC, ready for the next day.
- **Changing the registration never closes a day.** A day left open when a PC is replaced carries on on the counter's new PC (see *Replacing a PC* below).

How a PC is recognised

*A web browser cannot read a PC's hardware id, and the clinic network gives out changing IP addresses. So the system does not try to recognise the machine. Instead it gives the **browser** a number when the PC is registered.*

When a PC is registered:

1. A **Counter Device** record is created, such as **DEV-0007**, linked to the counter. It records who registered or asked for it, when, and from which browser.
2. A long random secret is created for that browser. The browser keeps it in two places:
 - a **cookie**, sent automatically with every request (it lasts ten years);
 - a **backup copy** in the browser's storage. If the cookie is ever cleared, the system restores it from this copy the next time the page loads.
3. The server keeps only a scrambled fingerprint (hash) of the secret. Nobody can copy the secret out of the

database to pretend to be a counter PC.

From then on, **every** save is checked: the system reads the cookie, finds DEV-0007, and from that the counter. That is what is stamped on invoices, returns, receipts and expenses.

What keeps the registration, and what loses it

Keeps it	Loses it (the PC shows Unregistered device)
Logging out and in, any user	Using a different browser (Chrome vs Edge vs Firefox)
Restarting the PC	Using a different browser profile , or a private / incognito window
Updating the browser	Clearing all site data for this site, or reinstalling the browser
Clearing only cookies (the backup copy restores it)	The Counter Device, or its Counter, being disabled
Another PC or browser taking over the same counter	

Registering a PC

A PC is registered **on the PC itself**, by clicking the red **Unregistered device** badge at the top of the page. What happens next depends on who clicks it.

A supervisor registers it

A supervisor's registration takes effect at once. No approval is needed.

1. Sign in on the PC as a supervisor and click the badge.
2. In **Register this device**, choose the **Counter**:
 - an existing counter, or
 - **+ New counter**. A name is suggested (the next number, such as *Counter 3*). Change it if you like. The counter is created and the PC registered to it in one step.
3. Click **Register**.

If the counter already has a PC, the dialog lists it before you click. It is disabled when you register (see *One device per counter*).

A cashier asks for it

A cashier does not need a supervisor beside them to set up a PC.

1. The cashier signs in on the PC and clicks the badge.
2. In **Ask to register this PC**, they choose a counter. Each counter shows whether it is free:
 - *Counter 2 · free, ready at once*
 - *Counter 1 · has a PC (DEV-0001), needs approval*
3. They click **Ask**.

The counter chosen	What happens
Has no PC	Approved automatically . The PC is the counter's PC at once and the badge turns blue (<i>Day not opened</i>). The device record notes <i>Approved automatically</i> .
Already has a PC	This PC would take over the counter, so the request waits for a supervisor. The badge shows Approval pending · Counter 1 in orange. The old PC keeps working until the request is approved.

Cashiers cannot create counters. A new counter is made by a supervisor, in **Register this device**.

Approving and rejecting requests

Supervisors see waiting requests as a number next to the counter badge, added to any day closes waiting for approval. The number updates on every open page as soon as a request is made.

1. Click the badge. **PCs waiting for approval** lists each request: the counter, who asked and from which browser, and the PC it would replace. If a day is open on that PC, it says so.
2. Click **Approve** or **Reject**.

Decision	Result
Approve	The requested PC becomes the counter's PC. The PC it replaces is disabled. A day open on the old PC carries on on the new one. The requesting PC's badge updates at once.
Reject	Give a reason, which is saved on the device record. The PC stays unregistered, and its badge shows Request rejected · Counter 1 . The cashier can ask again.

If the cashier asks again from the same PC, or a supervisor registers that PC directly, the earlier request is withdrawn automatically.

One device per counter

A counter has **one** working device at a time. Whenever a PC becomes a counter's PC (registered by a supervisor, approved, or approved automatically), the system **disables**:

- the counter's other devices, and
- whatever this browser was registered as before, if it was on another counter.

A disabled device immediately counts as **Unregistered device**. Its record stays in **Counter Device** for history, and the documents billed on it keep its number. A System Manager cannot re-enable it while the counter has another working device.

Several PCs and browsers

Several PCs online at once

Only PCs where **cashiers bill** need to be registered. PCs used by accountants, managers or supervisors for other work do not.

Situation	What to set up
Two cashiers billing at the same time, each with their own cash drawer	Two counters , one PC registered to each.
One desk, one drawer, cashiers taking turns	One counter , one PC. Change cashiers with Close & Hand Over .
A spare PC kept for emergencies	Do not register it until it is needed. Registering it takes over the counter.

Rule of thumb: **one counter for each cash drawer**. Each counter's expected cash is worked out separately, so two drawers sharing one counter can never balance.

The same PC, different browsers

The system cannot tell that two browsers are on the same PC. Each browser is a separate device.

- If only Chrome is registered and a cashier opens Edge, Edge shows **Unregistered device** and cannot bill. If they ask to register Edge to the same counter, the request needs a supervisor's approval, because it would take over from Chrome.
- If the request is approved, **Chrome stops working**, because a counter has one device.

Use one browser on each counter PC. A desktop shortcut that always opens that browser on the system helps. Reject requests from a second browser on the same PC unless the first one has stopped working.

A cashier on a PC that is not their counter's

A cashier's day belongs to them, so it shows on **any** PC they sign in to. On a PC that is not their counter's, the Cashier Console shows **Day open on another PC**.

- They **cannot bill** there. Cash documents are saved only on a PC of the counter the day is open on.
- They **can close** their day there. Day Close works from any PC.

Cashiers can be signed in on only one PC at a time, so signing in here signed them out of their counter's PC.

Replacing a PC, or a PC that has broken

Nothing is ever locked to a PC. To move a counter to another PC, on the **new PC**:

- **a supervisor** registers it to the same counter, which takes effect at once; or
- **the cashier** asks for the same counter, and a supervisor approves the request from any PC.

The old PC's device is disabled automatically. You do not need the old PC, and it does not need to be working.

If a cashier's day is open on the old PC, the dialogs say so, for example *Fatima's day CS-2026-00041 is open. It carries on on this PC*. Go ahead. The cashier signs in on the new PC and carries on billing **in the same day**. Nothing is lost, and the till does not need to be counted again.

Moving to a different cash drawer? Close the day first. An open day keeps adding up the cash it expects, so if the new PC sits at another drawer, the expected cash would cover two drawers while only one is counted.

If the old PC is being moved to a different counter while a day is open on its old counter, that day loses its PC.

The cashier can still close it from any PC, or another PC is registered to the old counter so they can carry on.

Who is checked, and when

The check happens when a cash document is **saved**, not when someone logs in. Anyone can sign in on any PC and open forms and reports.

User	Unregistered PC (or approval pending)	Registered PC, no open day	Registered PC, open day
Cashier	Cannot open a day. Cannot save cash documents.	Cannot save cash documents. Opens the day first.	Bills normally. Every document is stamped with the counter, the PC and the day.
Supervisor (System Manager, Management, or Cashier with <i>Is Supervisor</i>)	Can save. The document has no counter and no day.	Can save. The document has the counter and the PC, but no day.	Bills normally, stamped like a cashier.
Background jobs (token sync)	Never checked.		

The cash documents are **Sales Invoice**, **Sales Return**, **Receipt Entry** and **Expense Entry**.

A supervisor's cash taken without an open day of their own belongs to no till, and no Day Close will account for it. Supervisors who take cash should open a day like a cashier.

Who can do what

Task	Who
Create a Counter in the Counter list, rename or disable one	System Manager
Create a counter while registering a PC (+ New counter)	Any supervisor
Register a PC (takes effect at once)	Any supervisor
Ask to register a PC	Any cashier
Approve or reject a request	Any supervisor
See the Counter Device list	System Manager, Management
Disable or edit a Counter Device by hand	System Manager

Checking the PCs

Open **Counter Device**. Each row shows the device number, its counter, whether it is enabled, its **Approval Status** (Approved, Pending or Rejected), when it was registered and when it was **last seen** (updated about every ten minutes while it is in use).

Open a record to see its full history:

Section	What it shows
Main	Who registered it, when, and the browser it was registered from.
Request	The cashier who asked for it, and the supervisor who approved or rejected it, and when <i>Approved / Rejected By</i> is empty when a request was approved automatically, and the timeline says so.
Disabled	Who disabled it and when, and Replaced By : the device that took over the counter. Shown only for a disabled device.

The timeline at the bottom lists every change, including rejection reasons.

- A counter's **enabled** row is its PC. There is only ever one.
- A device not seen for days may be a PC that is no longer used.
- Each invoice, return, receipt and expense records its **Counter Device**, so you can always tell which PC it was saved on.

Questions

Can two PCs bill for the same counter? *No. The second one taking over disables the first.*

Is a new counter created automatically when a new PC is set up? No. Every counter stands for a cash drawer, which the system cannot see, so a person decides. A supervisor creates one in a single step with **+ New counter** while registering the PC.

Does a cashier's request always need a supervisor? Only when it would take over a counter that already has a PC. A request for a free counter is approved automatically.

A PC was set up again, or its browser was reset. Is the old number still active? No, as soon as the PC is registered again (or its request approved). The new number disables the old one.

Does closing the day free the PC for another counter? The PC is never held by a day. It can be registered to another counter at any time. The day is not closed by this, and the dialog warns about it first.

Somebody saw "Counter 1" on a PC that is not Counter 1. That is the cashier's open day, which follows them to whatever PC they sign in to. The Cashier Console marks it **Day open on another PC**. They cannot bill there.

Can the system recognise the PC itself rather than the browser? Not from a web browser. Use one browser per counter PC, and register only that one.

PART 4

Setup & Configuration

Done once by a System Manager: counters, token sync and prices.

12 Setting up counters

13 How tokens become invoices

14 Price lists

15 Testing with simulated tokens

CHAPTER 12

Setting up counters

This is done once. A **System Manager** creates the counters and manages PCs. Any supervisor can register a PC (step 4).

1. Create the counters

Go to **Counter**, then **+ Add Counter**, and enter a name such as *Counter 1*. Leave **Enabled** ticked.

Untick **Enabled** to take a counter out of use. Its PCs then count as unregistered.

2. Mark cash payment modes

The till only counts documents whose **Payment Mode** has **Mode** set to **Cash**. Open each **Payment Mode** and check the setting:

Payment Mode	Mode
Cash	Cash
Card, Bank Transfer, ...	Card / Bank / Other

If a cash payment mode is not marked **Cash**, those payments are missing from the expected cash, and every close will be short.

Default payment mode per customer

A new invoice starts with the customer's **Default Payment Mode** (on the Customer, under Default Price List). When the customer has none, it uses **Company** → **Default Payment Mode for Sales**. The same applies on the Sales Invoice form, to invoices raised from tokens, and to imported invoices. Token invoices use **Card** only if neither is set.

For example, set Cash on the walk-in customer and Card on a typing centre that pays by card. The cashier can still change the mode on the invoice.

An invoice never starts as a **Credit Sale**. The cashier ticks it when a sale is on credit.

For a **Cash** mode, the invoice asks for the **Received Amount** (the cash handed over) before it can be saved or submitted. It must cover the invoice total.

3. Set up the cashiers

For each person who takes money:

1. Give their **User** the **Cashier** role. Give a billing lead **Cashier Approver** as well, and supervisors **Management**. See [Roles and who can do what](#).
2. Create a **Cashier** record for them. Tick **Is Supervisor** for shift leads who may approve differences and close days for others.
3. Give the **User** a **username** that matches the desk name the token service sends, so their tokens' invoices are

raised in their name. See [How tokens become invoices](#).

A PIN is set. Type a new one below to replace it. ×

Full Name

Administrator

Shown in the till's sign-in list. Defaults to the user's full name.

☐ Is Supervisor

Permits price overrides, discounts beyond the threshold, and voids at the till.

☐ Disabled

Removes the cashier from the sign-in list on every terminal. Disable rather than delete: a deleted record is never sent to the tills, so it would stay usable there.

Counter PIN

Replace PIN

Type a new PIN to set or replace it. It is hashed on save and never stored.
Leave blank to keep the current PIN.

PIN Set On

28-09-2026 20:07:54

Asia/Dubai

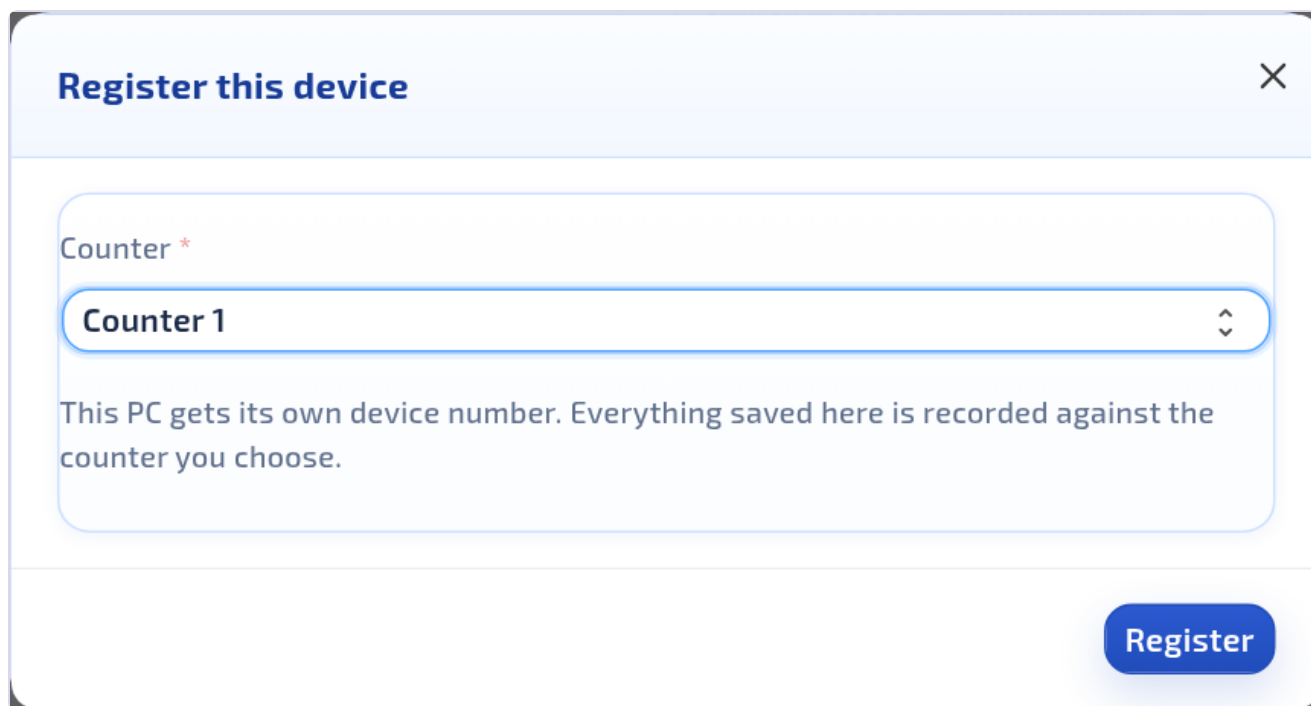

A Cashier record

Cashiers are automatically limited to **one login at a time**. Signing in elsewhere ends the older session. Users who also have System Manager or Management are not limited.

4. Register each counter PC

On each PC that takes money, either:

- a **supervisor** signs in on the PC, clicks the red **Unregistered device** badge, chooses the **Counter** and clicks **Register**. To create the counter at the same time, choose **+ New counter**; or
- the **cashier** signs in on the PC, clicks the badge and asks for a counter. A free counter is theirs at once. A counter that already has a PC needs a supervisor's approval (the badge shows **Approval pending**).

A dialog box titled "Register this device" with a close button (X) in the top right corner. Inside the dialog, there is a label "Counter *" followed by a dropdown menu showing "Counter 1". Below the dropdown, there is a text box containing the message: "This PC gets its own device number. Everything saved here is recorded against the counter you choose." At the bottom right of the dialog, there is a blue button labeled "Register".

The Register this device dialog

The PC is given a number such as DEV-0003. It is remembered in that browser (a cookie, plus a backup copy that restores the cookie if it is cleared).

Things that make a PC unregistered again:

- using a different browser or browser profile, or a private window;
- clearing *all* site data for this site in the browser;
- the Counter Device, or its Counter, being disabled;
- another PC or browser taking over the same counter.

Just register it again (or ask again). It gets a new number. See [How counter PCs are recognised](#) for requests, approvals and replacing a PC.

One device per counter

A counter has **one** registered device at a time. Registering a PC or browser to a counter disables the counter's other devices, and whatever that browser was registered as before. The dialog lists them before you click **Register**.

So use **one browser** on each counter PC. If a cashier opens another browser on the same PC, it shows *Unregistered device* and cannot bill. If you register that browser as well, the first one stops working.

A day open on a disabled device is not closed. The dialog warns about it, and the cashier carries on in the same day on the counter's new PC. See [How counter PCs are recognised](#) for replacing a PC that has broken.

Print invoices without the print dialog

In the Cashier Console, an invoice's **Print** menu has **Print Invoice** and **Print Receipt**, which send the PDF straight to the printer, and **Preview Invoice** and **Preview Receipt**, which show it in a popup first. The receipt entries appear for a cash sale, and for a credit sale once it has been paid. **Ctrl+P** prints the invoice, here and on the Sales Invoice form, and every print saves the invoice first. Browsers always show their print dialog unless

Chrome is started for kiosk printing. To print with no dialog on a counter PC:

1. Right-click the Chrome shortcut the cashier uses, open **Properties**, and add `--kiosk-printing` at the end of **Target** (after the closing quote).
2. Make the invoice printer the PC's **default printer** in Windows.
3. Print one invoice through the dialog first (start Chrome once without the flag) and set the paper size, margins, and **Headers and footers** off. Chrome keeps these settings.
4. Close every Chrome window and start Chrome from the shortcut again. The flag only takes effect on a fresh start.

Use that one shortcut and browser for the console, the same one the PC is registered in. Without the flag, **Print** still works but shows the usual print dialog.

5. Retire or replace a PC

Open **Counter Device** and find the PC by its number. The list shows its counter, when it was registered and when it was last seen. Open the record to see who registered it and from which browser, then untick **Enabled**. That browser immediately counts as unregistered. Only a System Manager can edit Counter Devices.

ID	Counter		Filter	×	⌵	Last Updated On
ID	Status	Counter	1 of 1			
☐ DEV-0001	Enabled	Counter 1	13 h	0	0	♥

The Counter Device list

To replace a PC, just register the new one to the same counter. The old PC is disabled for you.

6. Where to find everything

The **Medical Center** workspace has the **Cashier Console** (Day Open, the Sales Invoice Board, Sales Invoices, Receipts, Day Close and Day History in one place), and cards for Counter Sessions, Counter Session Summary, Counter, Counter Device and Cashier. **Permissions Help** at the top shows what each role can do, and **Help Center** opens these pages.

CHAPTER 13

How tokens become invoices

Reception issues each patient a **token** in the token service. The ERP pulls the new tokens about **once a minute** and raises a **draft Sales Invoice** for each, which then waits on the Cashier Console's **Sales Invoice Board**. Every token is recorded in **Medical Service Logs**, with what happened to it.

Set it up

A System Manager sets three things: Settings, the Cashier records, and the Medical Services.

1. **Settings** → **Token URL**: the token service's address. **Enable Token Sync** turns the pull on or off. A Token URL pinned in the site's `site_config.json` (`token_url`) always wins and is put back after every update.
2. **Cashier**: one record per reception desk, linked to its **User**. The user must have a **username** that matches the desk name the token service sends. A disabled Cashier is skipped. With no enabled Cashier that has a username, nothing is pulled.
3. **Medical Services**: one record per service the token service can send (see below).

To test without the real service, see [Testing with simulated tokens](#).

Medical Services

Each service the token service sends is a Medical Service listing the items it bills.

- **Display Name** must match the service name the token service sends, exactly. The **Title** is tried if no Display Name matches.
- **Services** lists the items it bills and their quantities.
- The prices do **not** come from this list. Each item is priced like any invoice line: from the customer's price list, else the Item's own **Service Charge**, **Typing Charges**, **Transaction Charges** and **GOV** (see [Price lists](#)). Tax follows the Item.

A token for a service with no matching Medical Service, or one with no items, is **Skipped** with that reason.

What the invoice gets

The invoice is raised as the desk's user, for today, as a draft.

On the invoice	Comes from
Customer	The company for a token with a CompanyId, else the Default Walk-in Customer (see Walk-in and corporate customers)
Customer Display Name , email, mobile	The patient on the token
Customer Token, Medical Service	The token

On the invoice	Comes from
Items	The Medical Service's items, priced from the customer's price list
Payment Mode	The customer's Default Payment Mode, else the company's, else Card. Never a credit sale
Owner	The user whose username matches the token's desk; Administrator when none matches

The cashier who opens it from the Board and bills it becomes its owner. See [Billing in the Cashier Console](#).

Medical Service Logs

One log per token: whether it became an invoice, and why not if it did not.

Status	Meaning
Completed	The invoice was raised. Sales Invoice links to it.
Skipped	The token was valid but deliberately not invoiced. Error Message says why, for example no matching Medical Service, or no name and no company. Fix the cause, then send the token again.
Failed	Something went wrong. It is retried automatically on later runs, up to 5 times over 2 days. Attempts counts the tries.
Pending	Being processed, or interrupted. Retried like a failure.

- **A token is never invoiced twice.** The same token sent again is recognised and ignored.
- Cashiers see only the logs of their own desk. System Managers see them all.

Sync Now

The Board's **Sync Now** button pulls new tokens at once, instead of waiting for the next minute.

A popup reports how many invoices were created, skipped and failed. Open **Medical Service Logs** for the reasons.

If nothing arrives: check **Enable Token Sync**, the **Token URL**, that the desk's **Cashier** is enabled with a username, and that the scheduler is running.

CHAPTER 14

Price lists

Every item has a normal price. A **price list** gives chosen customers different prices, for example a typing centre that pays less.

How an invoice gets its prices

The customer's Default Price List prices each line. Items not in that list use the Item's own charges.

When you pick a customer on a Sales Invoice, **Price List** is set to the customer's **Default Price List**. Then, for each item, the price comes from the first of these that exists:

1. a price for the item in that list **with dates covering the invoice date**;
2. the item's **undated** price in that list;
3. the **Service Charge**, **Typing Charges**, **Transaction Charges** and **GOV** on the Item itself.

The line's **Rate** is Service Charge + Typing Charges + Transaction Charges + GOV. VAT is charged on the Service Charge, Typing Charges and Transaction Charges only, never on GOV.

- Only selling price lists can be picked on an invoice.
- Changing **Price List** on a draft re-prices every line. Picking an item prices that line. Changing the date does not re-price, so pick the price list again after changing the date.
- You can still change a line's charges by hand on a draft.
- If an orange message says an item *has only a rate in price list ...*, that price has no charges entered. The Item's charges were used instead. Fix the price in the Price List Manager.

Standard Selling and the Item

Standard Selling holds each item's normal price. It always matches the charges on the Item.

- Change Service Charge, Typing Charges, Transaction Charges or GOV on the **Item**, and its undated Standard Selling price changes to match.
- Change the undated Standard Selling price, and the **Item's** charges change to match.
- Dated prices in Standard Selling are temporary. They never change the Item.

New customers get Standard Selling as their Default Price List.

Open the Price List Manager

Go to the Medical Center workspace and click Price List Manager. System Managers and Management can use it.

Standard Buying Buying 0

Standard Selling Selling 1

Typing Center Price List Selling 1

Typing Center Price List
1 Item(s) · average discount 37.5% against Standard Selling

ITEM	ITEM NAME	UNIT	SERVICE CHARGE	TYPING CHARGES	GOV	RATE	STANDARD	DISCOUNT	FROM	TO	
M06	Medical Service Fee	PCS	20.00 ل.ا	10.00 ل.ا	15.00 ل.ا	45.00 ل.ا	72.00 ل.ا	(%37.5) 27.00 ل.ا			Edit Delete

The Price List Manager

- **Left:** every price list, marked **Selling** or **Buying**, with the number of items in it. Search to find one.
- **Right:** the items in the selected list with their charges, rate and dates. Search to find an item. Each row has **Edit** and **Delete**.

Create a price list

Click **New Price List**, type a name and keep **Is Selling** ticked.

Tick **Is Selling** for a list used on invoices. Only selling lists can be picked on a Sales Invoice or as a customer's Default Price List.

The new list is empty. Add the items whose price is different. Items you leave out are charged at their normal Item price.

Add or change an item's price

Select the list, click **Add Item**, pick the item and adjust its charges. The rate is their sum.

1. Select the price list on the left, then click **Add Item**.
2. Pick the **Item**. Its Service Charge, Typing Charges, Transaction Charges, GOV, Unit and Currency are filled in from the Item.
3. Change the charges for this list. **Rate** is worked out as their sum.
4. Leave **From Date** and **To Date** empty for a price that always applies.
5. Click **Add**.

The Add / Edit price dialog

To change a price, click **Edit** on its row. To remove it, click **Delete**. Invoices then use the Item's charges for that item again.

Always enter the charges, not just a Rate. A price with only a Rate cannot be split into taxable and non-taxable parts, so invoices ignore it and use the Item's charges.

Rules the system checks:

- one undated price per item in each list;
- dated prices for the same item and list cannot overlap;
- enter both dates or neither;
- no negative amounts.

Temporary prices

Add a second price for the item with a From and To Date. It is used for invoices dated inside that range.

For example, an offer for October: add the item again with From Date 01-10 and To Date 31-10. Invoices dated in October use the offer. Before and after, they use the undated price.

The undated price stays as it is. When the dates pass, you can delete the dated price or leave it.

The Discount column

For a selling list other than Standard Selling, each price shows how far it is below the normal price.

Column	Meaning
Standard	The item's normal price in Standard Selling
Discount	Standard less this list's rate, and the percentage. Green is a discount. Red(... above) means this list charges more.

The line under the list name gives the **average discount** across its items. The Add and Edit dialogs show the same discount while you type.

Give a customer a price list

Set Default Price List on the Customer. Their invoices, including token invoices, then use it.

1. Open the **Customer**.
2. Set **Default Price List** and save.

The screenshot shows the 'Customer' form with the following fields and values:

- Customer Name ***: Gehad
- Customer Code ***: G001
- Customer Group ***: Default Customer Group
- Tax Id**: 1234 (Eg: TRN No in UAE)
- Customer Type**: Corporate
- Discount**: 0.000
- Company ID**: 0
- Typing Center**: (empty)
- Salesman**: (empty)
- Default Price List**: Typing Center Price List
- Default Payment Mode**: (empty)
- Payment mode new invoices for this customer start with. Empty uses the company default.**
- Allow Credit**: ☐
- Trade License No**: (empty)

Default Price List on a customer

- New invoices for the customer start with this list. The cashier can change **Price List** on a draft.
- **Token invoices** use the Default Price List of the customer they are billed to. That is the Corporate customer for a token with a CompanyId, and the Default Walk-in Customer for the rest. See [Walk-in and corporate customers](#).
- A customer with no Default Price List is charged the Item's own charges.

CHAPTER 15

Testing with simulated tokens

The **token simulator** stands in for the external token service, so the token sync can be tested without it. You create tokens in the desk. The sync fetches them from the simulator exactly as it would from the real service and raises the Sales Invoices.

It works only on sites in **developer mode**, or where `site_config.json` has `"token_simulator_enabled": 1`. Everywhere else the simulator answers with an error.

Set it up (once)

1. Open **Test Token** (search for it in the awesome bar).
2. In the list's menu (⋮), click **Use Simulator URL** and confirm. This:
 - sets **Settings** → **Token URL** to the simulator, for example `http://127.0.0.1:8508/api/method/digitz_erp.api.token_simulator.feed`;
 - turns on **Enable Token Sync**;
 - remembers the Token URL you had before, so **Restore Token URL** can put it back.

The banner above the list says whether everything is connected.

Token URL is the simulator: <code>http://127.0.0.1:8508/api/method/digitz_erp.api.token_simulator.feed</code> . The sync picks these tokens up every minute, or click Sync Now.					
ID	Token Number	Patient Name	Cashier	Filter	Created Date
☐	Patient Name	Token Number	Service	ID	1 of 1
☐	Rameez	1	EID-N-004	TT-2026-00009	2 h 0 ·

The Test Token list with the simulator banner

After every migrate the Token URL is checked for the site:

- `"token_url"` in the site's `site_config.json`, when set, is always used. Pin the real token service there.
- A simulator URL is rebuilt for the site it is on. On the live ERP that is `http://192.168.85.183/api/method/digitz_erp.api.token_simulator.feed` (or the site's `host_name`), so a database copied from another site keeps working.
- On a site where the simulator is off, a simulator URL is replaced by the URL saved before the simulator took over. With none saved, it is cleared and token sync is turned off.

On a bench with several sites, `127.0.0.1` reaches only the **default site**. For another site the URL uses the site's own name, which must resolve on the server. Add it to `/etc/hosts` if it does not.

Make tokens

Generate Test Tokens adds up to 50 tokens dated now. They are spread over the services and over every Cashier that has a username, and a share of them are billed to existing company customers.

To test one case exactly, click **+ Add Test Token**:

Field	Sent to the sync as	Notes
Token Number	TokenNumber	Empty gives the next number of the day. Text such as T-104 is allowed.
Patient Name	Name	
Service	Service	Sent as the service's Display Name , as the real service does.
Cashier	UserName	The user's username . The invoice is raised as this cashier.
Created Date	CreatedDate	Must be today , and later than the last token the sync has already seen.
Company / Company ID	CompanyId	Billed to that company. An unknown id tests automatic company creation. Empty means a walk-in.
Contact & personal details	Email, Mobile, Gender, ...	Optional.

Run the sync

- **Sync Now** on the Test Token list or on a token runs it at once and shows the result popup.
- Otherwise the scheduler picks the tokens up within a minute.

Open a token afterwards: the banner at the top shows its **Medical Service Log** and **Sales Invoice**, or why it was skipped or failed.

Things to know

- **A token is fetched once.** The sync asks only for tokens *after* the last one it stored today. Editing a token that has already been fetched does nothing. To test again, add a new token.
- **Re-sending the same token** (same number, service, name, application number and day) is recognised as *Already invoiced*. That is how you test duplicate protection.
- **Tokens from another day are never fetched**, because the sync reads one day at a time.
- **The payment mode** of a token invoice is the customer's **Default Payment Mode**, else the company's, else **Card**, the same as on the Sales Invoice form. A token invoice is never a credit sale. A Cash token invoice is saved without a Received Amount, and the cashier enters it when saving or submitting. See [Setting up counters](#).
- **A token without Mobile or WhatsApp**, when Settings makes the mobile number mandatory, gets the placeholder **0000** on its invoice. The draft is saved, but it cannot be submitted until the cashier enters the real number. The form shows an orange banner until then.
- **Cleaning up:** deleting Test Tokens does not delete the invoices or logs they produced.
- **When you are done**, use **Restore Token URL**, and turn token sync off in Settings if the real service is not in use.

PART 5

Reports

The day close slip, the dashboard and the sales reports.

16 Reports and the dashboard

17 Medical Center reports

CHAPTER 16

Reports and the dashboard

Day Close Slip

This is printed from Day Close after closing, or from any Counter Session with **Print** → **Day Close Slip**. It shows:

- the counter, PC, cashier, and opening and closing times;
- the previous close and the opening float;
- each cash movement, the expected cash, the counted cash and the difference;
- the opening and closing note-by-note counts;
- remarks, who closed the day if a supervisor did, and who approved a difference;
- signature lines for the cashier and supervisor.

Counter Session Summary

Report → **Counter Session Summary** (System Manager and Management) lists every day in a date range, one row per session.

01-09-2026		29-09-2026		Counter		Cashier		Status		⌵										
Session		Counter		Cashier		Opened		Closed		Status		Float		Cash Sales		Cash Recei...		Refur		
⌵

The Counter Session Summary report

Filter	Use
From / To Date	By the day's opening date. Defaults to this month.
Counter, Cashier	Narrow it to one desk or one person.
Status	Open, Closing (waiting for approval) or Closed.

The columns are the float, each cash movement, expected, counted, **difference** (highlighted when not zero), **Closed By** and **Approved By**.

Useful views:

- **Status = Closing**: differences still waiting for a supervisor.
- **Status = Open**: days not closed yet. Check these at the end of the day.
- **Filter by Cashier** over a month: a cashier's pattern of shortages.

Medical Center Dashboard

The **Counters** panel on the Medical Center Dashboard shows one card per counter, refreshed live:

Counters

Submitted today, by the counter PC it was billed on

Counter 1

DAY OPEN

AD Administrator
since 05:22

Cash in till 3,000.00 ل.ا
float 3,000.00 ل.ا

0 Invoices - 0.00 ل.ا

1 PC - seen 5 minutes ago

The Counters panel on the Medical Center Dashboard

Card shows	Meaning
Day open (green)	Cashier, time opened, cash in till now and float
Awaiting approval (amber)	Counted, waiting for a supervisor
Closed (grey)	Counted cash and whether it balanced, or was short or over
Not opened	No day today
Footer	Invoices submitted on this counter today and their total, plus the number of PCs and when one was last seen

Click a card to open its Counter Session.

The **Open Counters** tile counts counters with a day open. When closes are waiting, supervisors also see an amber **closes awaiting approval** pill at the top, which leads to Day Close.

Cashiers see only their own counter and figures.

CHAPTER 17

Medical Center reports

The **Reports** section of the Medical Center workspace has seven reports. They answer "how much did we sell, where, by whom and for what". Open a section for the details of each.

Reports 7 Reconciliation and revenue analysis.

Counter based Sales report

Sales per counter and per user, split into cash, card and credit. To check a till, use Counter Session Summary.

REPORT

Sales Summary Report

Sales per user, split by payment mode and credit sales, with a total for each user.

REPORT

Service wise Sales Report

Daily totals grouped by medical service, to see which packages carry the revenue.

REPORT

Itemwise Sales Report

Daily totals per item, for spotting movement line by line.

REPORT

Item Category Wise Sales

The same daily totals rolled up by item category for a higher level view.

REPORT

Sales Details Report

Line-level detail per invoice: commission fee, government fee, gross, tax and net.

REPORT

Counter Session Summary

Every Day Close: expected against counted cash per counter and cashier, with shortages and who approved them.

REPORT

The Reports section of the Medical Center workspace

Which report to use

Pick the report by the question you are asking. Most start on today's date.

Question	Report
How much did each person take, by payment mode?	Sales Summary Report
How much was taken at each counter, and by whom?	Counter based Sales report
Which invoices make up the takings, with their charges and VAT?	Sales Details Report
Which medical services sold, day by day?	Service wise Sales Report
Which items sold, day by day?	Itemwise Sales Report
Which item categories sold, day by day?	Item Category Wise Sales
Did each cashier's till balance?	Counter Session Summary

For every report:

- **Sales Returns are taken off.** A submitted Sales Return reduces the sales on the date of the return, not the date of the original invoice. Drafts and cancelled documents never count.
- Change the filters at the top, and the report refreshes.
- Click **...** (or **Menu**) → **Export** to download it as Excel or CSV, or use **Print**.
- A row that links to an invoice or item opens it when clicked.

Who sees what

Cashiers see only their own sales. Some reports are for System Managers only.

Report	Who can open it
Sales Summary Report	System Manager, Cashier
Service wise Sales Report	System Manager, Cashier
Itemwise Sales Report	System Manager, Cashier
Counter based Sales report	System Manager
Sales Details Report	System Manager
Item Category Wise Sales	System Manager
Counter Session Summary	System Manager, Management

Anyone with the Cashier role sees only the invoices they own, in every sales report except Counter based Sales report. Their **User** filter is ignored. System Managers and the Administrator see everyone's sales, even if they also have the Cashier role.

The workspace shows each person only the report cards they can open.

An invoice belongs to whoever last saved or submitted it. Picking a job off the Sales Invoice Board makes it yours.

Sales Summary Report

Total sales per user, split by payment mode, with a line for credit sales and a total for each user.

01-09-2026 30-09-2026 User		
User	Payment Mode	Total Amount
1		
2	Card	577.36 ل.ا
3	Cash	1,173.10 ل.ا
4	Total	1,750.46 ل.ا
5	Grand Total	1,750.46 ل.ا

[Collapse All](#)

For comparison, use >5, <10 or =324. For ranges, use 5:10 (for values between 5 & 10).

Execution Time: 0.000635 sec

Sales Summary Report

Filter	Use
From Date / To Date	Required. Defaults to this month.
User	One person's sales. Ignored for cashiers.

For each user it shows a heading, one line per **Payment Mode** (Cash, Card, ...), a **Credit Sale** line for credit invoices, and their **Total**. A **Grand Total** ends the report.

- Only **submitted** invoices count.
- Sales Returns come off the same user's line for their payment mode, or off **Credit Sale** for a credit return.
- The amount is each invoice's **net total**: after VAT, before rounding. It can differ by a few fils from the rounded totals in other reports.

Counter based Sales report

Takings per counter, with the users who worked each counter underneath. Split into cash, card and credit.

01-09-2026		29-09-2026		Counter		User		29-09-2026		
Counter		User		Invoices	Cash	Card / Bank	Credit	Returns	Tax	Total
○										
1	▼ Not recorded			7	926.43 ل.ا	577.86 ل.ا	0.00 ل.ا	100.00 ل.ا	15.03 ل.ا	1,504.29 ل.ا
2		Administrator		7	926.43 ل.ا	577.86 ل.ا	0.00 ل.ا	100.00 ل.ا	15.03 ل.ا	1,504.29 ل.ا
3	▼ Counter 1			2	147.00 ل.ا	0.00 ل.ا	0.00 ل.ا	0.00 ل.ا	2.50 ل.ا	147.00 ل.ا
4		Administrator		2	147.00 ل.ا	0.00 ل.ا	0.00 ل.ا	0.00 ل.ا	2.50 ل.ا	147.00 ل.ا
5	Total			9	1,073.43 ل.ا	577.86 ل.ا	0.00 ل.ا	100.00 ل.ا	17.53 ل.ا	1,651.29 ل.ا
Collapse All										
For comparison, use >5, <10 or =324. For ranges, use 5:10 (for values between 5 & 10). Execution Time: 0.001951 sec										

Counter based Sales report

Filter	Use
From Date / To Date	A date range. When both are set, Today is ignored.
Counter	One counter only.
User	One person only.
Today	A single day. Defaults to today, and is used when From and To are not both set.

Each counter is a bold row with its totals. Click its arrow to show the users who billed on it. The columns are:

Column	Meaning
Invoices	How many submitted invoices
Cash	Invoices paid by a payment mode whose Mode is Cash
Card / Bank	Invoices paid by any other payment mode
Credit	Credit sales
Returns	How much was given back by Sales Returns

Column	Meaning
Tax	VAT
Total	The rounded totals charged

Cash, **Card / Bank**, **Credit**, **Tax** and **Total** are after returns. **Returns** shows what was taken off, and **Invoices** counts invoices only.

- The counter is the registered PC the invoice was saved or submitted on. Invoices from before counters were set up show as **Not recorded**.
- A Sales Return is counted on the counter of the day it was saved in. A return saved outside an open day shows as **Not recorded**.
- A **Total** row ends the report.
- To check a till against its count, use [Counter Session Summary](#) instead. This report counts sales, not cash movements such as refunds or expenses.

Sales Details Report

One row per invoice or Sales Return, with its items, charges, VAT, payment mode and user. Returns are negative.

01-09-2026		29-09-2026		User	Customer	Payment Mode		
	Type	Document No	Date	Customer	Item Name	Service Char...	Typing Char...	Gov Fee
1	Sales Invoice	SI-00019-09-2026	28-09-2026	AL DURAH FOUNDATIONS	AOE Visa EID Transaction Charge AOE	100.00 ل.ا	10.00 ل.ا	200.00 ل.ا

For comparison, use >5, <10 or =324. For ranges, use 5:10 (for values between 5 & 10).								Execution Time: 0.00114 sec

Sales Details Report

Filter	Use
From Date / To Date	Defaults to today.
User	One person's invoices. Ignored for cashiers.
Customer	One customer's invoices.
Payment Mode	One payment mode, or Credit Sale for credit invoices only. Choosing Credit Sale adds a Credit Days column.

Column	Meaning
Type	Sales Invoice or Sales Return
Document No	Click to open the invoice or return
Item Name	All the items on the invoice
Service Charge, Typing Charges, Transaction Charges	The taxable charges
Gov Fee	The government fee, not taxed
Gross Amount, Tax Amount, Net Amount	Before VAT, the VAT, and after VAT
Payment Mode	The payment mode, or Credit Sale
User/Counter	Who owns the invoice

Only **submitted** documents are shown. The newest are at the top.

A **Sales Return** has its own row, with its charges and amounts **negative**. Add up a column, and returns are already taken off. The filters apply to returns too; choose **Credit Sale** to see credit returns.

Service wise Sales Report

For each day, the amount sold for each medical service, largest first.

Filter	Use
From Date / To Date	Defaults to today.

Each day is a bold row with that day's total, then one row per **Service** with its amount after VAT. Only **submitted** invoices count.

- The service is the **Medical Service** on the invoice. Token invoices always have one.
- Invoices without a Medical Service, such as ones keyed in by hand, are grouped as **No service**.
- A Sales Return comes off the service of the invoice each returned line came from.

Itemwise Sales Report

For each day, the amount sold for each item, largest first.

Filter	Use
From Date / To Date	Defaults to today.
Item	One item only.

Each day is a bold row with that day's total, then one row per **Item**. Amounts are **before VAT**. Only **submitted** invoices count, and Sales Returns come off the items returned.

Item Category Wise Sales

For each day, the amount sold in each item category (Item Group), largest first.

Filter	Use
From Date / To Date	Defaults to today.

Each day is a bold row with that day's total, then one row per **Item Category**. Amounts are **before VAT**. Only **submitted** invoices count, and Sales Returns come off the categories of the items returned.

Counter Session Summary

Every cashier's day in a date range: float, cash movements, expected and counted cash, and any difference.

Cash Sales Returns are already in it as **Refunds**. Use it to check that tills balanced, to find differences still waiting for approval, and to spot a cashier's pattern of shortages. See [Reports and the dashboard](#) for its filters and columns.

PART 6

Troubleshooting

Messages you may see, and what to do about each.

18 Problems and messages

CHAPTER 18

Problems and messages

"Unregistered Device": *This device is not registered as a counter*

This PC is not a counter, so a cashier cannot save cash documents on it.

COUNTER	DEVICE	CASHIER	DATE
Unregistered	-	Administrator	29-09-2026 09:36:25

This PC is not a registered counter

Register it to a counter first. Every day opened here then belongs to that counter.

[Register this device](#)

Day Open on a PC that is not a registered counter

- **New PC, or a new browser or profile on it?** A supervisor registers it. See [Setting up counters](#).
- **It worked yesterday?** The browser's data may have been cleared, the device or counter was disabled, or another PC or browser was registered to the same counter (a counter has one device). Reload once with Ctrl+Shift+R. If the badge is still red, a supervisor registers it again.

Approval pending · Counter 1

You asked for this PC to become Counter 1's PC, and Counter 1 already has one. A supervisor must approve it. The badge turns blue as soon as they do. You do not need to reload. Until then, bill on Counter 1's current PC.

Request rejected · Counter 1

A supervisor rejected your request. Ask them why. Click the badge to ask again.

Cashier Console: *Day open on another PC*

Your day is open on a different counter's PC. Your day follows you to any PC you sign in to, but you can bill only on its counter's PC. Go back to that PC, or close the day here. If that PC has broken, a supervisor registers this PC to your counter and you carry on. See [How counter PCs are recognised](#).

"Day Not Opened": *Open the day on Counter 1 before billing*

You have no open day on this counter. Click the badge and open the day. See [Opening your day](#).

If you **do** have an open day, it is on a **different counter**. Close that one first.

"Not Today's Invoice": *... is dated ... A cashier can save and submit only today's invoices*

Cashiers bill only invoices dated today. An invoice from another day opens read-only in the Cashier Console, and its date cannot be changed. Ask a supervisor to handle it. See [Supervisor tasks](#).

A draft from yesterday is not on the Sales Invoice Board

The Board lists today's drafts only. Older ones are in the **Sales Invoice** list for a supervisor. See [Supervisor tasks](#)

Print did nothing

Print saves the invoice first. If the save was stopped, for example by a missing field or the **Not Today's Invoice** message, nothing prints: fix what the message says and print again. **Items are required before printing** means the invoice has no items yet.

Counter 1 is in use / already has a day open by ...

Another cashier's day is still open on this counter.

- They are still here: they use **Close & Hand Over**. See [Handing over a counter](#).
- They have left: a supervisor uses **Close for Cashier**. See [Supervisor tasks](#).

You already have an unfinished day

Your previous day is still open, or waiting for approval. Close it, or ask a supervisor to approve it.

Logged In From Another Session

Cashiers can be signed in on only one PC at a time. Signing in on another PC ended this one. Sign in again here if this is where you are working.

A day is closed by counting the till on the Day Close page

Someone tried to submit a Counter Session from its form. Days are closed only from **Day Close**, so that a count is always recorded.

The expected cash looks wrong

- **Too low?** A cash invoice may still be a **draft**. Submit it. Also check that its Payment Mode's **Mode** is **Cash**.
- **Too high?** A refund or expense paid from the till may not have been entered, or was entered as non-cash.
- Click each line in **Cash for the Day** to see exactly which documents are counted.

A closed day has the wrong count

A closed day cannot be edited. A System Manager can:

1. open the Counter Session and click **Cancel**;
2. click **Amend**, correct the count and remarks, then **Save** and **Submit**.

The amended copy (such as CS-2026-00012-1) replaces the cancelled one in reports. It does not block the counter.

The badge does not update

Reload the page. The badge is read when the desk loads, and after you open or close a day.

APPENDIX

Permissions Reference

What each role can do, record by record. This is the content of the **Permissions Help** button on the Medical Center workspace. A person can hold more than one role.

APPENDIX A

The roles

Cashier

Counter staff taking payment.

Can: Work the counter from the Cashier Console on a registered PC: open the day, bill today's invoices from the Board, take payment, submit and print, collect payments on credit invoices (Receipt Entry), add a customer, and close the day. Look up items, services and other masters.

Cannot: Bill an invoice dated another day, or bill at all before opening the day. Cancel, amend or delete an invoice or a receipt. See or change prices, items or any other master. Stay signed in on two PCs at once.

Cashier Approver

Billing lead. Usually given together with Cashier.

Can: See every counter's invoices in the Sales Invoice list, and cancel, amend and delete them.

Cannot: Anything but Sales Invoices on its own: no customers, receipts or token logs. It is not a supervisor: it cannot approve a cash difference or a new counter PC, and with Cashier it still works on today's invoices only.

Management

The supervisor. A Cashier record marked Is Supervisor gives a cashier the same supervisor powers.

Can: Approve a cash difference at Day Close and a new PC taking over a counter, cancel a closed day, and manage prices in the Price List Manager. With Cashier, bill without opening a day and handle invoices from other days. Can stay signed in on several PCs.

Cannot: Open most records on its own. Give it with the roles for the work the supervisor does, such as Cashier.

System Manager

Setup and oversight.

Can: Fully manage customers, items, prices, services, token logs, counters and settings. Read and print every invoice. Has the supervisor's powers too.

Cannot: Change an invoice. That is deliberate: assign Cashier or Cashier Approver instead.

Administrator

The built-in superuser.

Can: Everything, on every record. Permission rules do not apply.

Cannot: -

APPENDIX B

By record type

Record	Cashier	Cashier Approver	Management	System Manager
Sales Invoice	Create, take payment, submit & print, today's only. Own in the list; every counter's drafts for today on the Board	Also cancel, amend, delete; all in the list	No access	Read & print all
Receipt Entry	Collect a credit invoice's payment: create, submit & print. Never cancel	No access	No access	Full, except submit
Customer	Read + create	No access	No access	Full
Counter Session (the day)	Open and close their own day; read & print it	No access	Read, approve a difference, cancel	Full
Counter Device	No access; registers a PC from the counter badge	No access	Read; approve a PC taking over a counter	Full
Medical Services	Read	No access	No access	Full
Medical Service Logs	Read own only	No access	No access	Full
Price List	Select only, so an invoice picks up the customer's price list	Select only	Manage prices in the Price List Manager	Full
Item Price	No access: the item brings its charges	No access	Through the Price List Manager	Full
Item, Payment Mode, Tax, Unit, Warehouse, Company, Terms, Stock Balance, Global Settings	Look up only (read), so the invoice can use them. Never create or change	No access	No access	Full
Employee, Cost Center, Account	Picked in an invoice or receipt (Salesman, Cost Center, accounts); cannot open the record	No access	No access	Full

Worth knowing

- **Where a Cashier sees only their own.** In the Sales Invoice list and the token logs. The Sales Invoice Board is the shared counter queue: every counter's drafts for today, whoever raised them.
- **Handling an invoice makes it yours.** Save or submit one and it moves to your name: it appears in your list, counts towards your counter and day, and the printout names you as Billed By. Pick a job off the Board and it becomes yours.
- **Cashiers work on today only.** A cashier can save and submit only invoices dated today, on a registered PC,

after opening the day. Older drafts are not on the Board; a supervisor finds them in the Sales Invoice list.

- **Who is a supervisor.** System Manager, Management, or a cashier whose Cashier record has Is Supervisor ticked. Supervisors approve cash differences and counter PCs, and are not held to an open day or to today's invoices.
- **Cashier Approver is not a supervisor.** It sees and can cancel every invoice, but approving cash differences and counter PCs, and working on other days, needs a supervisor.
- **An approver needs Cashier too.** Cashier Approver on its own reaches invoices and nothing else, not even a customer record.
- **One session per cashier.** Signing in on another PC signs a cashier out of the first. Management and System Manager are not limited.
- **Synced invoices ignore all of this.** Invoices raised from tokens are created by the server, so they appear no matter who is signed in.
- **Permissions are shipped with the app.** They are set again on every update, so changes made to these roles in Role Permission Manager are undone. Ask a developer to change them instead.
